

Unreal Engine | تقرير مهمّة | Parent and Child Components

This task focused on understanding Parent and Child relationships in Unreal Engine
The Capsule was used as the Parent and the Arrow as the Child
The activity helped demonstrate how components are organized and connected within the project

3

Learning Outcomes:

- Understood the Parent and Child hierarchy
- Identified the Capsule as the Parent and Arrow as the Child
- Successfully established the component relationship
- Observed the Child following the Parent during movement

2

Implementation:

- 1 The project was renamed to cliff_check_011
- 2 A Capsule was added and used as the Parent component
- 3 An Arrow was attached as the Child component
- 4 The component hierarchy was arranged to establish the Parent and Child relationship
- 5 The relationship was tested by moving the Capsule and observing the Arrow

1

Introduction:

This training task focused on understanding Parent and Child relationships in Unreal Engine through a practical activity using the Capsule and Arrow components

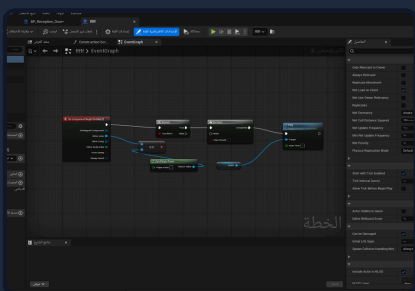

The Capsule was set as the Parent while the Arrow was connected as the Child

The activity demonstrated how components are organized and how the child follows the Parent within the project

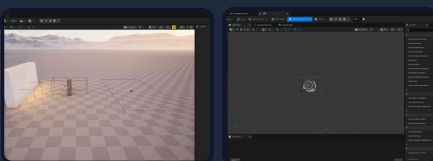

Task Objectives:

- 1 Understand Parent and Child relationships
- 2 Identify the Capsule and Arrow components
- 3 Understand component hierarchy
